01 PROFESSIONAL PROFILE

TECHNICAL RANGE AND ENGINEERING FOCUS

Computer Science graduate with hands-on experience across software engineering, cybersecurity, real-time systems, low-level development, reverse engineering and game development. Built distributed manager/agent applications, Java and C# systems, browser-deployed Unity projects, networking components and deterministic game logic. Particularly interested in architecture, debugging, Windows internals, performance and understanding how complex software behaves beneath the surface.

02 TECHNICAL EXPERIENCE

PROFESSIONAL AND OPERATIONAL SOFTWARE WORK

Israeli Navy (IDF) | SAP ABAP Programmer | 2019-2021

Developed and maintained internal software using SAP ABAP in a structured military technical environment.

Debugged application issues and supported internal operational software requirements through programming and technical problem-solving.

Worked in an operational organization where reliability, ownership and disciplined change handling were important.

03 EDUCATION

UNIVERSITY AND TECHNOLOGY-TRACK FOUNDATION

B.Sc. Computer Science | College of Management Academic Studies | 2022-2026 | Completed 2026

Selected coursework: Advanced Software Development, Operating Systems, Algorithms, Computer Networks, Cloud Computing, Cybersecurity, Communications Security, Game Development, Database Systems and Python.

Full Israeli Bagrut Certificate | Technology Track | Completed 2019

Advanced high-school track including 5-unit Computer Science, Systems Planning & Programming, Physics and English.

04 TECHNICAL STACK

LANGUAGES, PLATFORMS, SYSTEMS AND SELECTED TOOLS

LANGUAGES C, C++, C#, Java, Python, JavaScript, Rust, x86/x64 Assembly, ABAP	**SOFTWARE** .NET, Node.js, React, REST APIs, WebSockets, Server-Sent Events, SQLite
GAME / REAL-TIME Unity 6, Unreal Engine, Godot, URP, physics, NavMesh, WebGL	**SYSTEMS / SECURITY** Windows internals, reverse engineering, debugging, vulnerability analysis, secure coding
ENGINEERING Architecture, performance, networking, testing, deployment and troubleshooting	**TOOLS** Git, Visual Studio, VS Code, IDA Pro, Ghidra, WinDbg, x64dbg, Procmon, ReClass, dnSpy, FModel, Blender
FOCUS AREAS Systems programming, cybersecurity engineering, game/engine development and networking	**PORTFOLIO** github.com/MasterChiefProject | github.com/SigmaTokens

05 SELECTED ENGINEERING PORTFOLIO

PUBLIC SECURITY, SOFTWARE, NETWORKING AND GAME-DEVELOPMENT WORK

Selected academic, team and self-directed projects demonstrating different engineering disciplines. Playable browser builds and source repositories are available through GitHub.

SigmaTokens | Cybersecurity / Distributed Platform

TECH TypeScript · Node.js · React · Socket.IO · Server-Sent Events · SQLite

Built backend and frontend components for a manager/agent honeytoken platform used to deploy and monitor decoy assets.
Implemented real-time agent registration, status communication and alert delivery through WebSockets and Server-Sent Events.
Supported endpoint-agent behavior across Windows, Linux and macOS as part of the final cybersecurity project.

LINKS github.com/SigmaTokens | github.com/SigmaTokens/Sigma-Manager | github.com/SigmaTokens/Sigma-Agent

RGBQuest | Unity / First-Person Puzzle Adventure

TECH Unity 6 · C# · URP · Physics · NavMesh · WebGL

Created a three-stage first-person game combining RGB cube physics, pressure-plate state logic, portals, pickups and combat.
Implemented weapon, health/ammunition and NavMesh-driven ghost systems with distinct behavior roles.
Produced a playable WebGL release with custom build tooling and browser presentation.

LINKS masterchiefproject.github.io/RGBQuest | github.com/MasterChiefProject/RGBQuest

Scrabble | Java / Rules Engine / Networking

TECH Java 17 · Maven · JUnit · TCP · JavaScript

Implemented board validation, scoring, cross-word generation, tile exchange and multiplayer game coordination.
Built an exact dictionary subsystem with caching, Bloom-filter pre-checking and a bounded TCP dictionary service.
Added automated Java/browser tests and a browser adaptation for portfolio evaluation.

LINKS masterchiefproject.github.io/Scrabble | github.com/MasterChiefProject/Scrabble

Realmaze | Unity / Exploration & WebGL Optimization

TECH Unity 6 · C# · URP · AI Navigation · WebGL · Git LFS

Built a first-person escape game with collectible progression, chest/key gating, hostile zombies and complete death/victory flow.
Engineered a WebGL-specific performance profile covering draw distance, terrain cost, texture usage and rendering overhead.
Created reproducible browser-build tooling for a large Unity environment.

LINKS masterchiefproject.github.io/Realmaze | github.com/MasterChiefProject/Realmaze

KnightCookie | JavaScript / Deterministic Game Engine

TECH JavaScript · ES Modules · LocalStorage · Node test runner

Refactored a maze adventure into structured deterministic game state with seeded generation and testable combat/movement rules.
Implemented versioned autosave/manual-save persistence, malformed-state rejection and responsive browser controls.

LINKS masterchiefproject.github.io/KnightCookie | github.com/MasterChiefProject/KnightCookie

Nightmaze | Unity / First-Person Escape Horror

TECH Unity 6 · C# · URP · CharacterController · WebGL

Developed trigger-driven doors, portals, moving platforms, environmental horror audio and scene-based retry/victory flow.
Packaged a playable WebGL build with a custom browser shell and fullscreen/theme controls.

06 ADDITIONAL ENGINEERING CONTEXT

PRIVATE WORK, REVERSE ENGINEERING, DELIVERY AND QUALITY

PRIVATE MODDING MasterCheats: experimental mod menus, private-server tooling and game reverse-engineering work.	**REVERSE ENGINEERING** IDA Pro, Ghidra, WinDbg, x64dbg, Procmon, ReClass, dnSpy, FModel and binary/asset inspection workflows.
DEPLOYMENT WebGL build tooling, GitHub Pages delivery, custom browser shells, compression, caching and reproducible release flows.	**QUALITY** Automated tests, state validation, deterministic logic, regression checks, debugging and performance-oriented iteration.
